Medina to SR 202: Eastside Transit and HOV Project

August 2012

Crews accelerate completion of pond in Hunts Point

Three weeks of late evening work planned to finish key work before the rainy season

Beginning Thursday, Aug. 23, ECC crews will begin working into the late evening to accelerate construction of a retaining wall south of Fairweather Basin. Crews are working quickly to complete a stormwater pond north of the wall before wet weather begins; and completion of the wall is a critical aspect of that work.

With completion of the wall and pond, we will be able to get an early start planting landscape screening elements in this area.

Completing the pond before the rainy season is important so that it can be used to detain and treat stormwater runoff from the highway construction area with minimal use of a pump and generator and without the need for unsightly detention tanks.

This phase of work will take place 6 a.m. – 11:30 p.m., Monday through Friday, and will last three weeks. Work will entail truck deliveries of soil and materials and placement of concrete panel walls. Noisier activities, like trucking, will cease around 8:30 p.m. each evening while wall panel placement will continue until no later than 11:30 p.m.

When will work take place?

- 6 a.m. to 11:30 p.m., Monday through Friday, for three weeks.

How will residents be affected?

- Construction noise – Nearby residents should expect to hear the sounds of back-up alarms, trucks, excavators and generators, with the noisiest work scheduled to cease around 8:30 p.m. each evening.

24-hour construction hotline

A 24-hour construction hotline is available for residents who wish to speak with a project representative at any time of the day or night.

- 425-998-5200
